## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 21, 22, 47, 48, 53 and 54 are rejected under 35 U.S.C. 102(e) as being anticipated by Kamoto et al (US 2004/0069183),

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Kamoto et al teach an ink set comprising an ink comprising Pigment Blue 15:3 and Pigment Blue 15:4; an ink comprising Pigment Red 122, Pigment Red 209 and Pigment Violet 19, an ink comprising Pigment Yellow 74, Pigment Yellow 138, Pigment Yellow 150 and Pigment Yellow 180 and may further comprise an ink comprising carbon black. The reference teaches that the ink has a dynamic surface tension measured by a maximum bubble pressure method at a measuring temperature with a range of 24 to

Art Unit: 1755

26°C and a static tension measured at a temperature with a range from 24 to 26°C which satisfy the relationship  $0 \leq [\text{dynamic surface tension (mN/m)}] - [\text{static surface tension (mN/m)}] \leq 7 \text{ (mN/m)}$  and the dynamic surface tension is measured at the bubble frequency with a range from 0.5 to 35 Hz. The reference discloses that a nonionic surfactant can maintain the difference of the dynamic surface tension and the static surface tension with a predetermined range. The nonionic surfactants disclosed are the same surfactant claimed by Applicant in claims 53 and 54. See abstract and paragraph 0055-0058, 0076-0082, 0093-0104, 0191-200. The composition as taught by Kamoto et al appears to anticipate the claimed invention.

### ***Response to Arguments***

Applicant's arguments with respect to claims 21, 22, 47 and 48 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 1755

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
